

HORSE BARN

HOOF VS. FOOT - LET'S COMPARE!

- Get a piece of paper
- Trace your foot
- See if you can label the parts of your foot (toes, toenails, ball, arch, heel, ankle, joints)
- Name some differences and similarities between your foot and a horse's foot.

Did you know?

- A horse's foot only has 3 bones but a human's foot has 26
- As a horse walks and the part of the foot called the frog makes contact with the ground, it helps circulate blood to the rest of the foot
- The wall of a horse's hoof is called a toe
- Horse's hooves grow about 1 centimeter per month
- If a horse's hooves grow too long, their legs will be out of balance
